

RebelInuX White Paper

Version 3.0

RebelInuX (REBL)

Clément Landormy, Founder of RebelInuX

October 3, 2026

AI-Animated Historical Journey Collectibles Powered by Participation and a Pack of Digital Rebels!

Introduction

RebelInuX brings history to life through AI-animated video digital collectibles. We transform paintings, statues, and heritage sites into living stories. **This is cultural preservation powered by blockchain.**

Our mascot travels through time. We started with the French Revolution. **The community decides what comes next.**

It rewards participation, not holding. Create thumbnails. Select scenes. Tokenize animated paintings. Vote on contests. The community decides and earns \$REBL.

Inspired by the fearless Shiba Inu, RebelInuX is where history, art, and rebellion meet. Participate. Preserve history. Earn \$REBL.

Executive Summary

RebelInuX: Where history, digital art, and rebellion meet on the blockchain.

As the SocialFi market reaches \$17.1 billion and digital collectibles gain mainstream adoption, RebelInuX bridges cultural preservation with sustainable token economics.

RebelInuX transforms historical art into AI-animated Rebel Journey Collectibles while pioneering a sustainable SocialFi ecosystem that bridges digital ownership on Base (ZORA) with high-performance token economics on Solana. This innovative framework establishes five core pillars:

- **AI-Animated Historical Art:** Rebel Journey Collectibles bring museum paintings to life, preserving cultural heritage through cutting-edge AI technology
- **Tokenized Animated Paintings:** We tokenize animated paintings and works of art on Zora. Each painting becomes a tradeable content coin.
- **Participation Rewards:** The new system rewards participation through contests. Create thumbnails. Select scenes. Tokenize paintings. Vote.
- **Value Accrual:** \$REBL tokens benefit from trading revenue generated by tokenized animated paintings.
- **Community Governance:** The REBL Governance Hub (500K \$REBL threshold, 1 member = 1 vote) votes on contests, tokenization, and the future of the journey.

The ecosystem creates a self-reinforcing economic flywheel. Tokenizing animated paintings generates trading revenue. That revenue funds participation rewards and the AI production of new historical artworks. Immutable smart contracts with renounced authorities guarantee long-term security and protocol alignment.

1 Our Vision: Why History, Art, and Tokenization

1.1 The Problem: History Is Frozen in Time

Museums preserve our heritage, but they preserve it behind glass. Paintings hang still. Statues stand silent. Heritage sites are visited once and forgotten. For most people, history is something you read about in a textbook, not something you experience.

1.2 The Problem: Communities Are Left Out

Most content creators, whether they work on YouTube, TikTok, Instagram, or elsewhere, rarely involve their community in their decisions. They choose the topics. They choose the scenes. They choose what to create next. At best, they read feedback in the comments after the video is published.

This is a missed opportunity. Communities are not just audiences. They are curators, historians, and creators themselves. They know which moments matter, which stories deserve to be told, and which images should live on.

In RebellInuX, the community is at the center from the start. They choose the next Journey. They select the scenes. They vote for the winners. Every collectible is the result of collective decision-making, not a single creator's choice.

1.3 Our Artistic Approach: Animating Real Paintings

Most historical content on YouTube falls into one of two categories. Either it uses static paintings as illustrations, beautiful but frozen, or it uses AI to generate animated historical scenes from scratch. The problem with AI-generated scenes is that everything is invented. The faces of the historical figures. Their clothing and postures. The buildings, the streets, the landscapes around them. The light, the atmosphere, the moment itself. None of it is grounded in a real source. It is a plausible-looking guess, not a portrait of history.

RebellInuX takes a different path. We start with the original historical painting, the real source material created by an artist who witnessed or studied the event. We then use AI to animate it while staying as close as possible to the original style, colors, composition, and the painter's intent. The figures, the surroundings, the landscapes: everything comes from the painting itself. Nothing is invented.

And we add our signature: our mascot, RebellInuX, appears within the scene, painting the historical moment on a canvas. The mascot is not just a character. It is the artist, the witness, the storyteller. Every Rebel Journey Collectible carries this mark. It is how you know the scene is ours.

This is what makes RebellInuX different. We do not invent history. We animate it, from the paintings that already captured it.

1.4 The Solution: Tokenization Makes Culture Ownable

By deploying these animated scenes as content coins on Zora, we make them tradeable, collectible, and community-owned. Each Rebel Journey Collectible represents a real moment in history, preserved on-chain and shared with the world.

This approach aligns with growing concerns about AI-generated historical content. Researchers have noted that AI-generated images of historical events often prioritize visual appeal over accuracy, producing scenes that never existed and figures that never looked that way (Various, 2025).

RebellInuX is not just a project. It's a movement to make history live again.

2 Market Overview

2.1 The SocialFi Opportunity

SocialFi (Social Finance) combines decentralized finance (DeFi) principles with social media, giving users and content creators direct control over their data, content, and earnings (Market Research Future, 2026). The SocialFi market reached approximately **\$17.1 billion in 2026**, growing from \$14.78 billion in 2025 (Market Research Future, 2026). This growth is driven by rising crypto adoption, now exceeding 400 million users globally, combined with increasing creator economy participation and dissatisfaction with centralized platform monetization.

The SocialFi sector grew significantly between 2022 and 2025, with daily active wallets on SocialFi platforms increasing by over **500%** in that period (DappRadar, 2026). By early 2026, the combined market capitalization of SocialFi-related tokens had reached approximately **\$1.5 billion** (DeFi Llama, 2026). Key features driving this growth include:

- **Tokenized social capital:** Users can monetize their influence and engagement
- **Decentralized Autonomous Organizations (DAOs):** Community governance over platform decisions
- **Digital ownership through NFTs and content coins:** Users truly own their content and assets
- **Direct value distribution:** Rewards flow directly to creators and participants

2.2 The Digital Collectibles Market

The global NFT market grew from **\$60.82 billion in 2025 to \$86.23 billion in 2026**, representing a compound annual growth rate of **41.8%** (Fortune Business Insights, 2026). By 2030, the market is projected to reach **\$347.46 billion** (Grand View Research, 2026b). Digital collectibles are the largest segment within this market, with the digital collectibles market itself valued at **\$39.1 billion in 2026** and projected to reach **\$392.6 billion by 2034** (Grand View Research, 2026a).

NFT trading volume in 2022 reached **\$24 billion**, demonstrating the scale of economic activity in this space (DappRadar, 2022). Importantly, the market is maturing beyond speculation toward utility-driven assets that provide real value to holders (CoinDesk Research, 2026).

2.3 The Shift Toward Utility-Driven Assets

The NFT market is evolving from pure speculation toward utility-driven assets. According to industry analysis, utility-driven NFTs, assets that provide real benefits like loyalty rewards, community access, and governance rights, are leading the next wave of adoption (CoinDesk Research, 2026). RebelInuX aligns with this trend by offering:

- **Utility through rewards:** \$REBL earnings for contest winners and participants whose tokenized scenes reach trading volume milestones
- **Utility through governance:** Community voting on Journey Contest themes and treasury proposals
- **Utility through community:** Token-gated access via the REBL Governance Hub and collector leaderboards

2.4 Digital Art as a Growing Asset Class

Digital art is now the third-largest spending category among high-net-worth collectors (Art Basel and UBS, 2025). In 2025, **51%** of surveyed high-net-worth individuals purchased digital art, a significant increase from previous years (Art Basel and UBS, 2025). This shift is driven by younger collectors: Millennials' share of digital art purchases nearly doubled from 12.6% in 2018 to 23.8% in 2025 (Art Basel and UBS, 2025). The digital art market itself is valued at approximately **\$5.5-\$6.2 billion**, representing a significant and growing opportunity (Statista, 2026).

2.5 Positioning RebelInuX

RebelInuX sits at the intersection of three growing markets:

- **SocialFi:** A \$17.1B market with 500% growth in active wallets (Market Research Future, 2026)
- **Digital Collectibles:** An \$86B market growing at 41.8% CAGR (Fortune Business Insights, 2026)
- **Digital Art:** A \$6B+ market driven by younger collectors (Statista, 2026)

By combining AI-animated historical art with community governance and token rewards, RebelInuX is uniquely positioned to capture value across all three segments. The project's focus on cultural preservation and education through blockchain technology creates a compelling value proposition that differentiates it from purely speculative NFT projects.

2.6 Our Competitive Advantage

Unlike traditional NFT projects that rely on speculation, RebelInuX offers:

- **Participation rewards:** Contests reward creation, selection, and tokenization
- **Community governance:** 1 member = 1 vote, not whale-dominated
- **Cultural preservation:** AI-animated historical art with real educational value
- **Cross-chain utility:** Base (ZORA) for collectibles, Solana for tokenomics
- **Content Coins over NFTs:** Superior liquidity and creator economics
- **Tokenized animated paintings:** Each painting becomes a tradeable content coin

Quick Start: Join the Rebellion

1. **Watch:** Follow the Rebel Journey on TikTok, YouTube, Instagram, and Facebook. Like, share, and save the videos on your preferred platform.
2. **Enter:** Hold 500,000+ \$REBL and join the REBL Governance Hub on Telegram
3. **Contribute:** Enter a contest: design a thumbnail, propose a painting to tokenize, or suggest the next Journey theme
4. **Vote:** The REBL Governance Hub pre-selects finalists. The community then votes for the winner on X.
5. **Earn:** Winners earn \$REBL, a base reward plus volume bonuses. Participation is rewarded.
6. **Own:** Winning entries become **Rebel Journey Collectibles**, content coins on Zora, tradeable tokens representing real cultural moments. Collectible, ownable, part of history.

3 RebelInuX: AI-Animated Journey Collectibles & SocialFi Architecture

Our Mission: Transform historical art into AI-animated video digital collectibles. Our mascot travels through time, witnessing pivotal moments in human history. Each Journey is a collection of AI-animated digital collectibles that preserve cultural heritage.

What is SocialFi? SocialFi (Social Finance) rewards participation in culturally significant digital creation. You own real assets, not just digital entries in a pool. In RebelInuX, you participate in contests, create content, and earn rewards. You don't stake tokens.

3.1 User Journey at a Glance

A RebelInuX participant enters contests, designing thumbnails, or proposing paintings to tokenize. The REBL Governance Hub pre-selects finalists. The community then votes for the winner on X. Winners receive \$REBL, and their entries become content coins on Zora. (Detailed in Section 4.)

3.2 How RebelInuX Differs from Traditional NFTfi

Unlike traditional NFTfi protocols that require locking or staking, RebelInuX allows you to:

- **Keep custody:** Assets stay in your wallet, never locked
- **Earn through participation:** Contests reward creation and curation
- **Preserve utility:** Content coins remain tradeable and accessible
- **Support culture:** Your participation funds AI-animated historical art

The key differences are summarized in Table 3.2 below.

Table 1: Comparison of Traditional Staking vs. RebelInuX		
Feature	Traditional Staking	RebelInuX
Reward mechanism	Lock tokens, earn yield	Participate in contests, earn \$REBL
Entry requirement	Stake capital	Free to enter contests
Value creation	Passive emissions	Active trading fees from content coins
Asset utility	Locked while staked	Content coins stay tradeable

Why participation? Traditional staking locks your tokens and creates no lasting value. RebelInuX is different. You participate in contests, designing thumbnails, selecting scenes, proposing paintings. Winners are rewarded, and the winning entries become content coins on Zora. You create real cultural value, not just entries in a liquidity pool.

3.3 Multi-Chain Architecture

The RebelInuX ecosystem leverages multiple blockchains optimally. Base blockchain (via ZORA) handles AI-animated Journey Collectible content and community (Base Docs, 2026). Solana manages the token economy and value accrual (Solana Docs, 2026). This cross-chain design ensures seamless interaction, directly rewards creators, and drives value back to the entire ecosystem.

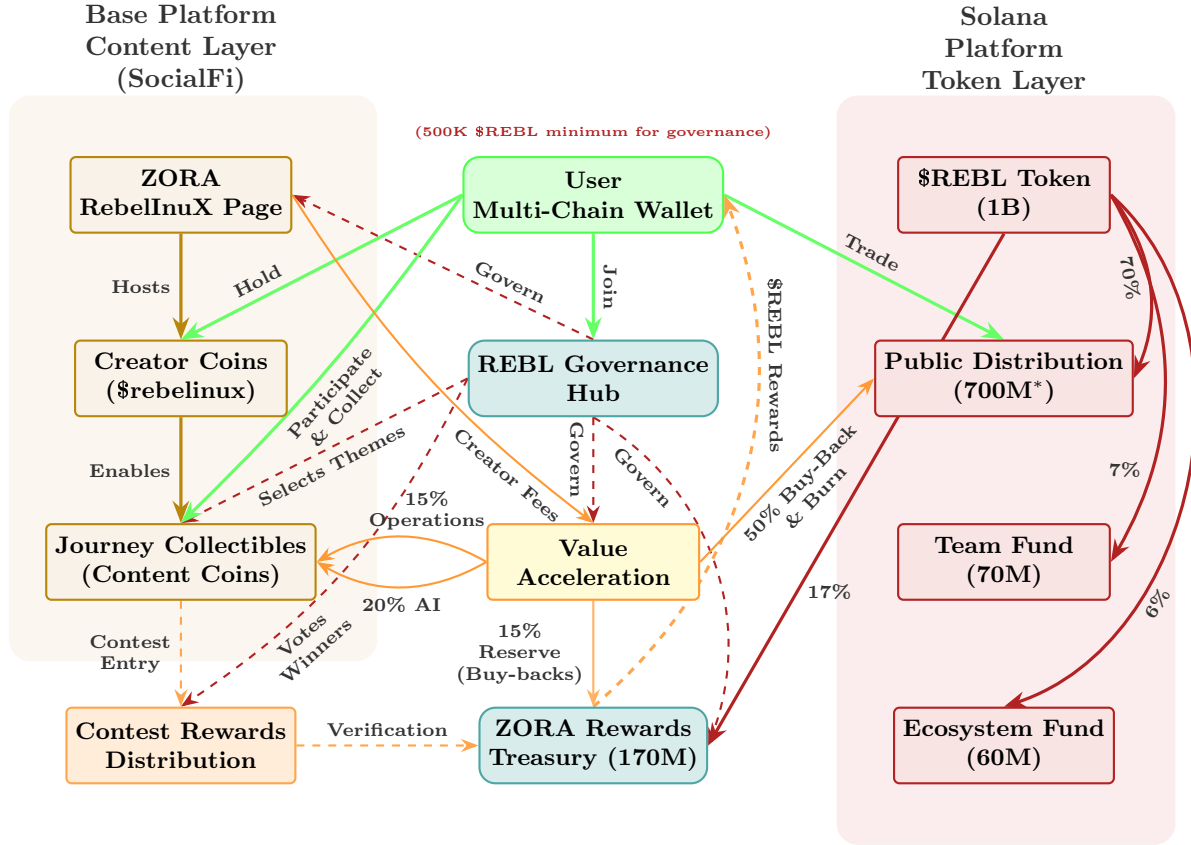

Figure 1: RebelInuX multi-chain architecture showing the Base content layer (Creator Coin + Digital Collectible Bundle), Solana token layer, and core value flows. All Value Acceleration deployments are triggered by REBL Governance Hub vote.

* The 700M public distribution was initially allocated through the pump.fun bonding curve. Following graduation, these tokens are now tradeable via the PumpSwap liquidity pool.

Legend of Diagram Symbols and Colors

- **Tan Boxes and Arrows:** Base Assets (ZORA): Creator Coin + Journey Collectibles
- **Red Boxes and Arrows:** Solana blockchain assets and token distributions
- **Dashed Red Arrows:** Governance by REBL holders (500K minimum)
- **Green Boxes and Arrows:** User interactions and wallets
- **Teal Boxes:** ZORA Rewards Treasury Wallet
- **Orange Boxes and Solid Arrows:** Value Acceleration: Creator fees split into governance-controlled pools (50% Buy-Back & Burn, 20% AI Production, 15% Reserve for buy-backs and community initiatives, 15% Operations); all deployments triggered by REBL Governance Hub vote
- **Orange Dashed Arrows:** Claim process and reward distribution

3.4 Long-Term Vision

RebelInuX aims to operate with transparency and legal compliance, with plans to eventually register as a formal entity. Our path is progressive decentralization. Over time, governance powers (treasury allocation,

protocol parameters) will transfer to the REBL Governance Hub. The ZORA Rewards Treasury will progressively move under community governance. We don't promise "complete" decentralization, just meaningful, verifiable transfer of governance to our community.

4 The Participation System

The RebelInuX ecosystem rewards participation, not holding.

4.1 Rebel Journey Collectibles

Rebel Journey Collectibles are AI-animated videos created by the project, retracing important historical events of a country at a specific point in time. Each Journey is a collection of video digital collectibles. Each collectible represents a special scene selected by the community through a RebelInuX contest, deployed as a content coin on Zora.

The inaugural **French Revolution Journey** chronicles the twilight of the Ancien Régime and the Revolution that followed. The collection currently spans several chapters:

- **REBL-J1A:** "Twilight of the Ancien Régime" (1779) — *Chapter I*
- **REBL-J1B:** "Winter of Discontent" (1780–1788) — *Chapter II*
- **REBL-J1C:** "The Oath" (April–June 1789) — *Chapter III*
- **REBL-J1D:** "The Fall" (July 14, 1789) — *Chapter IV*
- **REBL-J1E:** "Liberty" (July–October 1789) — *Chapter V*
 - **REBL-J1E-01:** "Abolition of Privileges" (August 1789)
 - **REBL-J1E-02:** "The Women's March" (October 1789)
 - **REBL-J1E-03:** "Chaos at Versailles" (October 1789)

Figure 2: The inaugural Rebel Journey Collection: The French Revolution Journey. The collection currently features **REBL-J1A:** "Twilight of the Ancien Régime" (1779), **REBL-J1B:** "Winter of Discontent" (1780–1788), **REBL-J1C:** "The Oath" (April–June 1789), **REBL-J1D:** "The Fall" (July 14, 1789), and the first scenes from Chapter V: "Liberty": **REBL-J1E-01:** "Abolition of Privileges" (August 1789), **REBL-J1E-02:** "The Women's March" (October 1789), and **REBL-J1E-03:** "Chaos at Versailles" (October 1789). Mint on [ZORA](#).

4.2 The Videos

The Rebel Journey is told through two video formats.

Short-form vertical videos. Each chapter and each individual part of a Journey is released as a short vertical video on TikTok, YouTube, Instagram, and Facebook. These videos bring specific historical scenes to life: the mascot appears within the scenes, and the moment is retold in 2 minutes max. Short-form videos are how the project reaches new audiences and how the community discovers the scenes that will later be selected for tokenization.

Long-form YouTube video. When a Journey is complete, the full story is assembled into a single long-form video published on YouTube. It retraces every chapter in order, from the opening scene to the final part, in a single continuous narrative. The long-form video is the definitive record of a Journey, and it is where new viewers can experience the whole story at once. A Journey is considered complete once every chapter has published all its planned videos.

Free to watch. All videos are free to watch on every platform. Viewing is not gated by token ownership. The tokenized collectibles are separate: they represent ownership of a specific scene, but anyone can watch the source videos. This keeps cultural preservation accessible while keeping digital ownership meaningful.

4.3 Tokenization of Animated Paintings

Every Rebel Journey video is built from multiple historical paintings, each animated by AI and woven into a single continuous narrative. The community then decides which scenes are worth preserving on-chain.

1. A set of historical paintings is selected for a chapter
2. Each painting is animated by AI and integrated into the video
3. The video is published on all RebelInuX channels
4. A Tokenisation Contest is held: the community chooses a specific scene to tokenize
5. The winning scene becomes a content coin on Zora
6. The community trades the coin, and the trading fees flow back into the ecosystem

What becomes a content coin. Every Rebel Journey Collectible is a content coin on Zora that represents one specific scene from a published video. Only scenes selected through contests are tokenized. Scenes that are not selected remain part of the video and are viewable by anyone, but they are not minted as collectibles.

Where the fees go. ZORA charges a 1% trading fee on content coins, of which 0.5% goes to the creator. All creator fees flow into the Value Acceleration mechanism, where the REBL Governance Hub decides how they are allocated (50% Buy-Back & Burn, 20% AI Production, 15% Reserve, 15% Operations).

4.4 Contests

- **Thumbnail Contests:** Create a thumbnail for our videos.
- **Tokenization Contests:** Choose a scene from our videos to be tokenized on Zora.
- **Journey Contests:** Decide the next historical theme of the journey.

4.5 Rewards

Table 2: Contest Winner Reward Structure

Trading Volume	Volume Bonus (in \$REBL)	Cumulative Total
\$2,500	\$3	\$3
\$5,000	\$6	\$9
\$10,000	\$12	\$21
\$25,000	\$30	\$51
\$50,000	\$60	\$111

All rewards are paid in \$REBL. A base reward, announced per contest, is awarded to every winner. Volume bonuses apply to Tokenisation Contests only. Volume bonuses are cumulative: reaching a higher milestone includes all lower-milestone bonuses.

4.6 Governance

The REBL Governance Hub (500K+ \$REBL) votes on:

- Pre-selection of contest finalists
- The future of the journey

5 Tokenomics

The RebelInuX tokenomics are designed for a fair launch on Pump.fun, followed by sustainable growth across both Solana and Base blockchains. The project will bootstrap fairly, then activate its full SocialFi ecosystem with a fixed supply of 1 billion (1,000,000,000) tokens.

5.1 Fair Launch Mechanism

The RebelInuX token (\$REBL) was launched on pump.fun to ensure a transparent and equitable initial distribution, leveraging the platform's core features: one-click creation, a bonding curve, and automatic graduation (Pump.fun Docs, 2025).

- **Total Supply:** 1,000,000,000 \$REBL (1 Billion) with 6 decimals.
- **Initial Distribution:** 100% of the supply was minted into the pump.fun bonding curve. The creator received **zero tokens** at launch, adhering to a true fair launch.
- **PumpSwap Pool Creation:** Upon graduation, the pump.fun contract automatically creates the initial Liquidity Pool (LP) on **PumpSwap**.
- **LP Locking:** The LP tokens representing this initial liquidity are created. **90% of these LP tokens will be locked for 1 year** to ensure project longevity and commitment.
- **Founder Token Acquisition:** The founder purchased tokens on the open bonding curve like any other participant. These personally acquired tokens are the source of all allocations for the Team Fund, Ecosystem Fund, and ZORA Rewards Treasury outlined below.

5.2 Final Token Allocation

The successful conclusion of the bonding curve sale triggers the activation of the full RebelInuX ecosystem. The definitive distribution of the total 1 billion token supply is as follows:

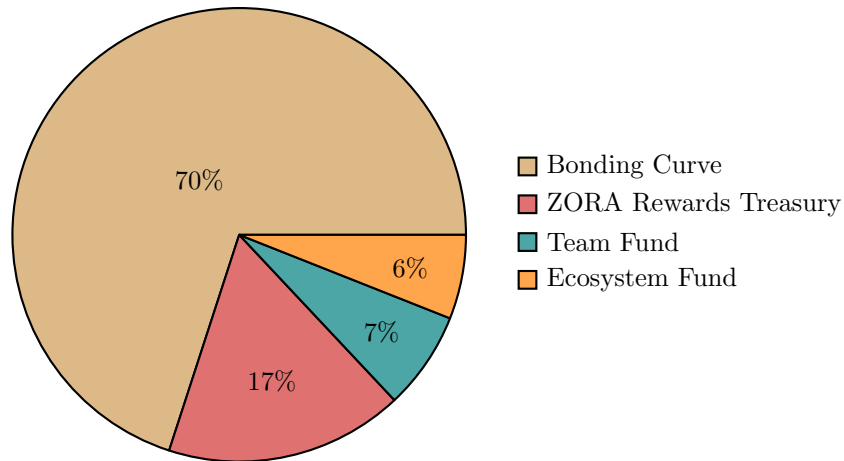

- **Bonding Curve Distribution (70%):** 700M \$REBL - Represents the tokens distributed to the public during the fair launch. These tokens were available for purchase by all participants at progressively increasing prices, ensuring equitable access without preferential treatment.
- **ZORA Rewards Treasury (17%):** 170M \$REBL - Dedicated to funding contest prizes and volume-milestone bonuses. Rewards are distributed to contest winners and to those whose selected scenes reach volume milestones. The treasury is secured in a multi-sig wallet.

For maximum security and transparency, the entire allocation is held in a dedicated multi-sig cold storage wallet: [ANjMEXSCm...AQ9Juo](#)

- **Team Fund (7%):** 70M \$REBL - Dedicated to compensating and retaining core contributors. The allocation has been finalized with a transparent vesting structure for optimal long-term alignment:
 - **Immediate Operations (40%):** 28M \$REBL available for strategic initiatives
 - **Long-Term Alignment (60%):** 42M \$REBL in 3-year linear vesting with 40% cliff

Verification: [Vesting Contract](#) • [Multi-Sig Wallet](#)

- **Ecosystem Fund (6%):** 60M \$REBL - Development, audits, marketing. On-chain vesting with a 6-month cliff. (See 5.3 for full schedule and contracts.)

Definitive Allocation of the 1B \$REBL Supply

5.3 Ecosystem Fund Allocation & Vesting

The Ecosystem Fund (60M REBL, 6% of total supply) is designated for development, audits, marketing, and operational costs. It is divided into two portions with tailored release schedules to ensure both immediate operational capability and long-term, aligned growth. All funds are custodied in the same secure multi-signature wallet.

- **Initial Operations (0.5%):** 5,000,000 \$REBL
 - **Purpose:** Essential marketing, development, and operational costs during the first 6 months post-TGE.
 - **Release:** Fully allocated to the ecosystem multi-signature wallet at TGE.
- **Sustained Growth (5.5%):** 55,000,000 \$REBL
 - **Purpose:** Ongoing development, partnerships, grants, and future operational expenses.
 - **Vesting Schedule:** Subject to a 6-month cliff. Thereafter, 20% is unlocked followed by linear vesting of the remainder over 18 months. This schedule is enforced on-chain via **StreamFlow** for transparency (Streamflow Docs, 2026). Unlocked tokens are streamed to the ecosystem multi-signature wallet. [View Vesting Contract on Solscan](#)

Governance & Custody:

- **Custody:** All tokens, both initially allocated and vested, are received by the same secure 2-of-3 multi-signature wallet (Solana Foundation, 2025).
- **Current Control:** The wallet is controlled by the founder.
- **Future Goal:** To decentralize control via a community proposal, transitioning to a 3-of-5 multi-signature wallet governed by core contributors and community members through the REBL Governance Hub.

On-Chain Verification:

- **Ecosystem Multi-Sig Wallet:** [DGRMGRm6f...1sa7R](#) (Holds the initial 5M REBL and receives vested tokens)

- **Vesting Contract:** [B477oon9L...C6sum7P1](#) (Holds and controls the release of the 55M REBL)

Note: The vesting contract holds the Sustained Growth allocation and controls its release schedule, streaming tokens to the ecosystem multi-sig wallet upon unlock.

5.4 Participation Rewards Treasury

The ZORA Rewards Treasury (170M \$REBL) funds contest prizes and volume-milestone bonuses. The complete reward structure is detailed in Table 4.5 (Section 4).

5.5 Cross-Chain Value Acceleration

The RebelInuX ecosystem leverages a sophisticated multi-chain value acceleration mechanism to maximize value for \$REBL holders. Revenue generated from our ZORA assets is strategically used to benefit the Solana-based \$REBL token through a transparent fee distribution system.

ZORA Fee Structure

ZORA charges different trading fees depending on the asset type:

- **Creator Coin (\$rebelinux):** 3% total fee, of which 1% is the creator fee.
- **Content Coins (Rebel Journey Collectibles):** 1% total fee, of which 0.5% is the creator fee.

All creator fees flow to the Value Acceleration mechanism.

Fee Distribution

The REBL Governance Hub votes on when and how each pool is deployed, and can adjust the distribution percentages (50/20/15/15) at any time:

- **Buy-Back & Burn Pool (50%):** Reserved for \$REBL buy-backs and burns on Solana. Deployments are triggered by Governance Hub vote, allowing the community to time buy-backs strategically.
- **AI Production Pool (20%):** Reserved for the creation of Rebel Journey Collectibles, including AI video generation tools, animation, voice, editing, and rendering infrastructure. Deployed at Governance Hub discretion.
- **Reserve Pool (15%):** A general-purpose reserve for future buy-backs and community initiatives. Provides supplementary funding for the ZORA Rewards Treasury's initial 170M allocation.
- **Operations Pool (15%):** Covers hosting, security, tooling, minting of Rebel Journey Collectibles, and day-to-day ecosystem support on ZORA.

Progressive Decentralization

The ecosystem is designed for gradual transition to community governance:

- The ZORA Rewards Treasury (170M \$REBL) is designed to sustain contest rewards for over 2 years: 40% (68M) released immediately as a cliff, 60% (102M) vesting linearly over 2 years. Beyond this period, the 15% fee Reserve and other ecosystem revenue provide supplementary funding for contest rewards and community initiatives, deployed at REBL Governance Hub discretion.

- The REBL Governance Hub can propose and vote on adjusting the distribution percentages (50% Buy-Back & Burn, 20% AI Production, 15% Reserve, 15% Operations) at any time. The community decides how creator fees are allocated.

Rationale: This creates a powerful cross-chain feedback loop. Trading activity on our ZORA assets accumulates revenue into governance-controlled pools, which the community can deploy strategically for buy-backs, AI production, and operations.

6 Evolving Tokenomics & Future Utility

The tokenomics outlined in this document represent the foundational layer of the RebelInuX SocialFi ecosystem. Our commitment is to evolve these mechanics transparently under community guidance, enhancing sustainability, utility, and value accrual for all holders.

6.1 Building on a Deflationary Base

The cross-chain buy-back and burn mechanism, funded by 50% of ZORA revenue, provides deflationary pressure on the \$REBL supply whenever the REBL Governance Hub triggers a buy-back. This is discretionary rather than automatic, allowing the community to time buy-backs strategically. Future governance may vote to augment this with additional burning mechanisms, further increasing token scarcity.

6.2 Expanding Token Utility

The primary utilities of \$REBL are governance (via the REBL Governance Hub with 500K threshold, 1 member = 1 vote) and value accrual via the 50% buy-back and burn pool, deployed at Governance Hub discretion. The community may propose and vote on additional utilities, such as:

- Using \$REBL as a preferred currency for fees within ecosystem products.
- Granting exclusive access to contest winners and top participants.
- Partnerships with other crypto projects, subject to Governance Hub approval.

All new utilities will be proposed, debated, and implemented through the governance process.

Partnerships. External collaborations follow a two-step process: the core team negotiates terms with the potential partner, then submits the finalized agreement to the REBL Governance Hub for ratification. This ensures every partnership aligns with the long-term interests of \$REBL holders, while protecting the confidentiality of negotiations.

7 REBL Governance Hub & Journey Contest

RebelInuX prioritizes effective, low-friction community governance over complex, low-participation DAO structures. All key decisions, from Journey Contest finalist pre-selection to treasury allocations, are made through the **REBL Governance Hub**, a token-gated system integrated directly into our primary communication channel, Telegram.

7.1 How the Governance Hub Works

The REBL Governance Hub is a token-gated Telegram group. Access requires holding 500,000+ \$REBL. Verification is handled by Collab.land. Each member has one equal vote.

[Join the REBL Governance Hub](#)

The Three Contest Types

RebelInuX runs three types of contests: Thumbnail Contests, Tokenization Contests, and Journey Contests. The full mechanics are detailed in Section 4.

Internal Governance

REBL holders who meet the threshold have the power to vote on:

1. **Journey Contest Finalists:** Pre-select the finalists for the next Journey theme (country + historical period).
2. **Treasury Proposals:** Propose and vote on initiatives funded by the ZORA Rewards Treasury, including triggering buy-backs from the Buy-Back & Burn Pool.
3. **Protocol Parameters:** Adjust key parameters (e.g., contest schedule, participation thresholds, reward structure, and the Value Acceleration distribution percentages).

Partnerships & Grants

External collaborations follow a two-step process:

1. **Negotiation:** The core team negotiates terms with the potential partner.
2. **Ratification:** The REBL Governance Hub votes to approve or reject the finalized agreement. This ensures every partnership aligns with the long-term interests of \$REBL holders, while protecting the confidentiality of negotiations.

7.2 The Journey Contest

The Journey Contest is the flagship community engagement mechanism. The REBL Governance Hub pre-selects finalists, and the community votes for the winning theme on X.

What are Rebel Journey Collectibles?

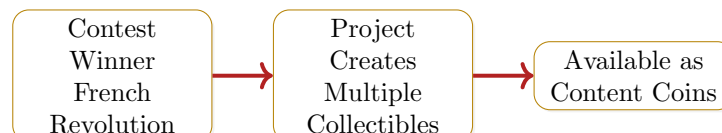

Rebel Journey Collectibles are content coins on Zora. The Journey Contest determines which historical period and country will be the next Journey collection. Each collectible is a special scene selected through a community contest. The winning scene becomes tradeable and collectible on Zora. See [Section 4](#) for the full mechanics.

Contest Mechanics

1. **The Challenge:** Community members submit theme proposals by creating an original image featuring the RebelInuX mascot in a specific **country** and **historical period** (e.g., RebelInuX at the Fall of the Berlin Wall, 1989).
2. **Pre-Selection:** The REBL Governance Hub reviews all submissions and selects a shortlist of finalists based on skill criteria relevant to the contest type:
 - **Thumbnail Contests:** Originality, visual impact, clarity, alignment with the video’s theme
 - **Tokenisation Contests:** Strength of the argument, historical relevance, narrative potential
 - **Journey Contests:** Creative vision, historical significance, alignment with the RebelInuX mascot’s identity

Only entries meeting these criteria advance to the voting phase. This ensures every finalist entry reflects genuine skill and effort.
3. **Winner Determination:** The winner is determined by a community vote on X among the finalists.
 - **Finalists:** Selected by the REBL Governance Hub based on the skill criteria above.
 - **Voting Criterion:** The community votes for the best entry based on the contest’s skill criteria.
 - **Voting Period:** Announced per contest.
 - **Winner:** The finalist with the most votes wins.
4. **Tie-breaking:** In the rare event of a tie, the project owner makes the final decision to ensure a winner is declared within the contest timeline.
5. **Veto:** In extreme cases (offensive, illegal, or plagiarized content), the Governance Hub may veto a winner by a 75% supermajority vote
6. **The Prize:** The winning theme becomes the project’s next official **Journey**. The winner receives a base \$REBL reward (amount announced per contest), public credit, \$rebelinux Creator Coins, and a free mint of the first video digital collectible from the collection.
7. **Production:** The project produces multiple AI-generated Journey video digital collectibles based on the winning theme, retracing key historical events of that country/period.
8. **Content Coins:** The newly minted Rebel Journey Collection becomes available as content coins on Zora. Holders can trade them and participate in the journey.
9. **Repeat:** A new contest begins once the current Journey is completed. The duration of each Journey varies based on the historical theme and the number of videos produced in the collection.

Example Journey Flow

Current Journey

As of this whitepaper version, the current Journey is the **French Revolution Journey**, with collectibles including REBL-J1A, REBL-J1B, and REBL-J1C. Additional chapters will be released as the Journey unfolds.

Contest Schedule

- **Submission Period:** Announced per contest
- **Voting Period:** Announced per contest
- **Winner Announcement:** Announced per contest
- **Production Timeline (post-contest):** The winning collection is produced and minted. Duration varies by historical theme.

7.3 Why a Governance Hub, Not a DAO?

- **Simplicity:** Participating is as easy as joining a Telegram group.
- **Engagement:** Governance happens where the community already lives.
- **Security:** Collab.land provides enterprise-grade token gating (Collab.land, 2026).
- **Equal Voting:** 1 member = 1 vote prevents whale dominance.
- **Cost:** No gas fees for voting or proposals.

7.4 Future Evolution

If the community grows to demand a full on-chain DAO, a vote within the Governance Hub will initiate that transition. Until then, the **REBL Governance Hub remains the definitive decision-making body**.

7.5 Implementation Status

RebelInuX is progressively rolling out its SocialFi ecosystem. The following components are currently live, with additional features under development:

Live Features

- **REBL Governance Hub:** Token-gated Telegram via Collab.land (500K \$REBL threshold, 1 member = 1 vote)
- **Journey Contest:** Pre-selection by the REBL Governance Hub, community vote on X for the winning entry
- **Contests:** Thumbnail, tokenization, and journey contests
- **Content Coins on Zora:** Winning entries become tradeable content coins

Upcoming Features

- **Treasury Proposal Framework:** Community-driven funding for ecosystem initiatives
- **Parameter Adjustment Voting:** Community governance over protocol parameters

8 Decentralization & Security

8.1 Ecosystem Security & Infrastructure

Our commitment to security extends beyond our own contracts to the foundational layers we build upon. We have chosen industry-leading platforms for their proven security, decentralization, and reliability.

- **ZORA Network Security:** Our Creator Coins and Rebel Journey Collectibles are deployed on the ZORA network, an Ethereum Layer-2 built on the **Base** blockchain. ZORA inherits the robust security of the Ethereum ecosystem while offering low-cost and efficient transactions (ZORA Docs, 2026).
- **Base Blockchain Security:** Base is a **secured, Ethereum Layer-2** chain incubated by Coinbase. It is built on the MIT-licensed OP Stack, the same technology powering Optimism (Base Docs, 2026).
- **Solana Blockchain Performance:** The \$REBL token resides on the Solana blockchain, chosen for its **high throughput, low transaction costs, and speed**. Solana's unique Proof-of-History (PoH) consensus provides deterministic leadership scheduling (Solana Docs, 2026).

This multi-chain architecture strategically leverages the core strength of each platform: ZORA/Base for secure digital ownership and SocialFi, and Solana for high-performance tokenomics.

8.2 Current State of Decentralization

At RebelInuX, our foundational principles are transparency, decentralization, and security. We believe that true empowerment arises when control is distributed across the community, while maintaining the legal and operational compliance required for long-term sustainability.

\$REBL Token on Solana:

- **Contract Renouncement:** The **Freeze Authority, Mint Authority, and Update Authority** for the \$REBL token smart contract have been permanently renounced.
- **Implications:** No single entity can freeze token transfers or mint new \$REBL tokens. The smart contract code is immutable.
- **Liquidity Protection:** The initial REBL/SOL pool on PumpSwap has **90% of its LP tokens locked for 1 year**.
- **Team Alignment:** Tokens allocated to the ecosystem fund are subject to transparent, linear vesting.

Creator Coins & Content Coins on ZORA:

- **Founder Commitment:** 50% of the Creator Coins supply is allocated to the founder and subject to a 5-year linear vesting schedule.
- **Decentralized Ownership:** Each asset is owned directly by the holder, secured by the ZORA protocol on Base.
- **Immutable Contracts:** Smart contracts are non-upgradeable; behavior and metadata cannot be changed after deployment.
- **Censorship-Resistant:** Assets cannot be altered, frozen, or seized by any central party.

Rebel Journey Collectibles:

- Each Rebel Journey Collectible is a fully on-chain asset on ZORA (Base).
- The subject matter is determined by community vote via the REBL Governance Hub.
- Rebel Journey Collectibles are content coins on Zora, tradeable, collectible, and part of the historical journey.

Our vision is to cultivate an unstoppable rebellion, resistant to censorship and manipulation, while operating with the legal compliance required for long-term sustainability.

9 Our Rebellion Roadmap

Q2 2025: Foundation & Launch Completed

- \$REBL token creation on pump.fun
- Community building on X, Telegram, Discord
- Renouncement of mint, freeze, and update authority

Q3-Q4 2025: SocialFi Launch & Journey Begins Completed

- Creator Coins & Content Coins on ZORA
- First Rebel Journey minted (French Revolution)
- \$REBL listing on PumpSwap

October 2026: The Participation Era Begins Completed

- Holding-based rewards retired
- New system: participation rewarded through contests
- Contests: thumbnails, tokenization, journey

Q4 2026: Contests & Tokenization In Progress

- Thumbnail contests launched
- Tokenization contests launched
- Volume-milestone reward system

Q1 2027: Expansion & Second Journey Planned

- Second Rebel Journey launched (community-voted theme)
- Expanded ZORA collection and new Journey Collectibles
- Continued treasury scaling via governance-triggered buy-backs
- Mascot origin story (illustrated narrative of Idyls's journey through history)
- Museum & cultural-site collaborations (research, licensing, partnerships)
- Formal entity registration process initiated

Q2-Q4 2027: Governance Transfer & Growth Planned

- Progressive transfer of protocol parameters to Governance Hub
- Multi-region historical arcs (Asia, Americas, Africa)
- Community Reserve fully under community governance
- Self-sustaining deflationary flywheel

Note on Timelines: This roadmap outlines our strategic goals and estimated timeframes. Development is complex and unpredictable. These dates are forecasts, not promises, and may shift based on technical challenges, community feedback, and market conditions.

The Evolving Path of the Rebellion

10 About the Founder

Clément Landormy: A dedicated expert in cryptoassets and blockchain technology with over three years of specialized experience gained through his PhD in economics. His expertise encompasses cryptoasset valuation, econometrics, and market analysis.

Clément has conducted extensive empirical research using on-chain data from Binance, Coinbase, and Coin-Metrics, focusing on market risks, asset pricing, and financial forecasting. He is proficient in quantitative analysis, financial modeling, programming, and data visualization.

His mission is to develop transparent, innovative, and community-driven blockchain projects that advance the industry and foster trust within the ecosystem.

11 Meet Our Inspiration: RebelInuX's Model

RebelInuX is more than just a meme coin, it's a reflection of the loyalty, playfulness, resilience, and strong character embodied by our beloved dog, Idilys.

About Idilys

Idilys is a Shiba Inu known for her unwavering loyalty, sharp intelligence, courage, and strong personality. She's a true rebel at heart. She doesn't listen much to orders and hates being on a leash. Despite her independence, she's loving and fiercely loyal. She embodies the spirit of rebellion, community, and perseverance, serving as the perfect symbol of strength and freedom.

Why Idilys?

Our dog serves as the mascot and inspiration for RebelInuX because:

- **Loyalty:** Like our community, Idilys is fiercely loyal and dedicated.
- **Resilience:** Always bouncing back, just like our token aims to grow and adapt.
- **Independence:** She's strong-willed and refuses to be controlled, a true reflection of rebellion.
- **Playfulness:** Bringing joy and fun, which is at the heart of our meme culture.

12 Join the Rebel Pack and Unleash the Rebellion

We believe in challenging the status quo, fighting injustices in the crypto sphere and beyond. As a community, we stand united in pushing boundaries, standing up for what's right, and making a difference. We are building more than just a token; we are building a movement powered by **AI-animated historical Rebel Journey Collectibles** and a sustainable **participation-based SocialFi ecosystem**.

Together, we are more than just a meme, we are a rebellion that fights for change.

Become part of the wildest crypto movement. Connect with the community, explore our digital assets, and join the conversation on our official channels:

- **Explore the Core Assets:** [ZORA Collection](#) (Creator Coins + Rebel Journey Collectibles)

- Follow the News: [Twitter](#)
- Join the Chat: [Telegram](#)
- Join the REBL Governance Hub: [Telegram](#) (500K \$REBL required)
- Connect with the Community: [Discord](#)
- Follow the Journey: [Instagram](#) — [TikTok](#) — [YouTube](#) — [Facebook](#)

Revenue generated through our social channels, once established, will be shared between founder compensation and RebelInuX cultural preservation and community initiatives. The specific split is at the founder's discretion and may be revisited under future governance.

Join us and help build a vibrant, rebellious SocialFi ecosystem that stands strong together!

13 How to Get \$REBL Tokens

There are two ways to get \$REBL: earn it by winning a contest, or buy it on the open market.

1. Win a Contest

Participate in a RebelInuX contest. Every contest winner receives a base \$REBL reward, with the exact amount announced in each contest. If the winning entry's tokenized scene reaches volume milestones, cumulative bonuses apply (see Table 4.5).

2. Purchase on the Open Market

\$REBL is publicly traded on Solana decentralized exchanges. The primary market for initial liquidity is:

Trade on [pump.fun](#)

[Click to open](#)

We are actively pursuing listings on additional DEXs and CEXs to improve accessibility and liquidity.

14 Token Creation and Verification

The **RebelInuX (\$REBL)** token was officially created on **18 June 2025** at **20:38 UTC** using the [pump.fun](#) platform, which handles the initial token deployment and bonding curve mechanism (Pump.fun Docs, 2025).

Solana Token Address:

`F4gh7VNjtp69gKv3JVhFFtXTD4NBbHfbEq5zdiBJpump`

\$rebelinux Creator Coin (Base)

The **\$rebelinux** token serves as the Creator Coin for the RebelInuX ecosystem.

ZORA: [View Creator Coin](#)

BaseScan: `0xf95BEeF6439ec38fA757238Cdec8417ABDA536bd`

Supply Distribution Analysis (as of October 2, 2025):

- **Total Supply:** 1,000,000,000 \$rebelinux
- **Protocol Reserves:** 489,448,313 (48.94%) – 5-year linear vesting
- **Founder Allocation:** 11,309,640 (1.13%) – including 757,953 secondary market acquisitions
- **Liquid Supply:** 499,242,047 (49.92%) – available for trading

Rebel Key (Base)

The Rebel Key is the original eligibility pass for the RebelInuX ecosystem, a relic of the past era.

ZORA: [View Rebel Key](#)

BaseScan: `0xf786232930e1f43b73b8e5d83192800bfca8a7f3`

Rebel Journey Collectibles (Base)

The current collection is REBL-J1 (1789 French Revolution).

ZORA: [View REBL-J1A](#)

BaseScan: `0x631e050fa042c2da1d3b8abe7a260b53ffc83f7f`

On-Chain Verification

- **\$REBL Token Contract:** Verify on [Solscan](#)
- **\$rebelinux Creator Coin:** Verify supply distribution on [BaseScan](#)
- **Rebel Journey Collectibles:** [View Collection on ZORA](#)
- **ZORA Digital Collectible Collections:** View the complete collection at <https://zora.co/@rebelinux>

Note: Supply metrics undergo periodic revision to reflect vesting progression and market activity.

This documentation ensures that the creation process and security claims are transparent and verifiable by all community members and stakeholders.

15 Conclusion

RebelInuX turns history into living art. Through AI-animated collectibles, sustainable token economics, and community governance, we are building not just a project, but a movement. Join us in preserving history, one Journey at a time.

Participate. Preserve history. Earn \$REBL.

Important Market Considerations & Risks

Volatility & Market Manipulation

Participants in the RebelInuX ecosystem should be aware of the highly volatile and speculative nature of cryptoasset markets. Upon the launch of our initial liquidity pool, it is common for automated bots and large-scale traders ("whales") to engage in market manipulation strategies. This can include:

- **Extreme Price Volatility:** Rapid and significant price increases ("pumps") and decreases ("dumps").
- **"Sniping" and Front-running:** Bots may execute transactions before others, gaining an unfair advantage.

This activity is an external feature of the trading environment and is not initiated by, nor within the control of, the RebelInuX team.

Our foundational mitigations against malicious activity are:

- The permanent renouncement of mint, freeze, and update authorities upon graduation to DEX listing.
- The locking of **90% of the initial liquidity pool (LP) tokens**. The remaining portion is held in a secure multisig wallet for future community-approved initiatives.

Investors should exercise extreme caution, conduct their own research (DYOR), and never invest more than they are willing to lose. The RebelInuX project is focused on long-term utility and growth, not short-term price action.

Jurisdictional Restrictions

AVERTISSEMENT POUR LES RÉSIDENTS FRANÇAIS

Interdit aux résidents français.

En raison des restrictions réglementaires de l'AMF (Autorité des Marchés Financiers), les résidents et citoyens français sont expressément interdits d'acheter, de détenir ou d'échanger le jeton RebelInuX.

ATTENTION: RESTRICTIONS FOR THE EEA & SWITZERLAND

Due to regulatory restrictions, including those under the EU's Markets in Crypto-Assets (MiCA) regulation, this offering is **not intended for residents** of the European Economic Area (EEA) or Switzerland. Citizens and residents of these jurisdictions are expressly prohibited from participating.

Legal Disclaimer

RebelInuX is a community-driven project designed for entertainment and community engagement centered around AI-animated historical art. This token is **not a security, investment, or financial product** and should not be viewed as such. It confers no ownership, equity, or financial rights. Its value is derived solely from community participation and speculative demand.

The system rewards participation through contests. Contests are free to enter. No purchase is required to participate. Rewards are distributed in \$REBL.

Risk Warning: Cryptocurrency investments carry significant risks, including the potential loss of the entire principal amount invested. The regulatory landscape for digital assets is evolving. Please conduct your own extensive research (DYOR) and consult with a qualified financial and legal professional before participating. RebelInuX does not guarantee any financial returns and is not responsible for any financial damages or losses incurred.

Glossary

Creator Coin The main token of a creator on Zora. In RebelInuX, it is \$rebelinux. It serves as the digital claim ticket for the ecosystem.

Content Coin A fungible token on Zora representing a specific piece of content (a scene, a painting, a video). In RebelInuX, Rebel Journey Collectibles are content coins.

Governance Hub The token-gated Telegram group where holders of 500,000+ \$REBL debate and vote on key decisions.

Milestone A trading volume threshold that unlocks a bonus for a contest winner. Bonuses are cumulative.

Volume The total value of all trades executed on a token over a given period.

Base Reward The guaranteed \$REBL reward awarded to every contest winner. The amount is announced per contest and is separate from volume-milestone bonuses.

Rebel Journey Collectible An AI-animated video collectible representing a historical scene selected through a RebelInuX tokenisation contest. Deployed as a content coin on Zora.

Tokenization The process of converting an asset, in our case a historical painting or scene, into a token, here a tradeable content coin on Zora.

REBL The reward token of the RebelInuX ecosystem, deployed on Solana.

\$rebelinux The Creator Coin of RebelInuX, deployed on Zora (Base).

Zora The protocol where RebelInuX deploys its Creator Coin and Content Coins.

Base The Ethereum Layer-2 blockchain where Zora operates.

Solana The blockchain where the \$REBL token is deployed.

Frequently Asked Questions

How do I participate in a contest?

Follow the instructions in the contest announcement. Each contest specifies the steps. Generally, you submit an entry (a thumbnail, a scene proposal, or a theme proposal) and post it in the RebelInuX Rebellion community on X with your Solana wallet address.

Do I need to hold tokens to participate?

No. Contests are free to enter. No purchase is required. You only need a Solana wallet address to receive your reward (base + bonuses) if you win.

How much can I win?

Every contest winner receives a base \$REBL reward, with the exact amount announced in each contest announcement.

Additionally, **Tokenisation Contest winners** earn cumulative \$REBL bonuses as their tokenized scene reaches trading volume milestones (see Table 4.5). Journey and Thumbnail Contest winners receive the base reward only.

Winners also receive public credit, \$rebelinux Creator Coins, and a free mint of the first video digital collectible from the collection.

How are winners selected?

The process has two stages. First, the REBL Governance Hub reviews all submissions and pre-selects a shortlist of finalists based on skill criteria, which vary by contest type: originality and visual impact for Thumbnail Contests, argument strength and historical relevance for Tokenisation Contests, and creative vision for Journey Contests. Second, the community votes for the winner on X among the finalists. In the rare event of a tie, the project owner makes the final decision. A 75% supermajority of the Governance Hub may also veto a winner in extreme cases (offensive, illegal, or plagiarized content).

How do I vote?

There are two ways to participate in decision-making.

Community vote (open to everyone): Once the Governance Hub has published the finalists, anyone can vote for their preferred entry through a poll on X. The poll runs for a period announced per contest.

Governance Hub vote (token-gated): Holders of 500,000+ \$REBL vote directly in the REBL Governance Hub on Telegram. Each member has one equal vote, regardless of how much \$REBL they hold. See “What is the Governance Hub?” below for a full list of what the Hub votes on.

How do I receive my reward?

Rewards are distributed in \$REBL to the Solana wallet address you provide with your contest entry.

What is the Governance Hub?

The Governance Hub is a private Telegram group for holders of 500,000+ \$REBL. Members pre-select contest finalists, vote on treasury proposals and protocol parameters, and ratify negotiated partnerships.

What happens if my chosen scene does not reach the volume milestones?

For Tokenisation Contest winners: you keep the base contest reward and the free mint of the first collectible from the collection. Volume bonuses only apply if the trading volume thresholds are reached.

Can I participate in multiple contests?

Yes. Each contest is independent. You can enter as many as you like.

What is the difference between a Creator Coin and a Content Coin?

A Creator Coin (\$rebelinux) is the main token of the creator on Zora. A Content Coin represents a specific piece of content, like a Rebel Journey Collectible.
